1. Normal Distribution (Stock Returns)

To simulate returns with an average of 0.5% and a standard deviation of 2%:

Formula: `=NORM.INV(RAND(), 0.005, 0.02)`

Practice Task: Use `=1 - NORM.DIST(0.05, 0.005, 0.02, TRUE)` to find the probability of a return > 5%.

2. Poisson Distribution (Claims Frequency)

To simulate the number of claims per day with an average rate (λ) of 1.5:

Formula: `=POISSON.DIST(k, 1.5, FALSE)` (where k is the number of claims, e.g., 0, 1, 2...).

Practice Task: Use `=POISSON.DIST(0, 1.5, FALSE)` to see the probability of having exactly zero claims today.

3. Exponential Distribution (Time Until Failure)

To simulate hours until a machine fails with an average of 50 hours ($\lambda=1/50$):

Formula: `=-50 * LN(RAND())`

Practice Task: Use `=EXPON.DIST(10, 1/50, TRUE)` to find the probability that it fails within the first 10 hours.

4. Gamma Distribution (Insurance Severity)

To model claim amounts (skewed right) using Alpha=2 and Beta=500:

Formula: =GAMMA.INV(RAND(), 2, 500)

Practice Task: Use =GAMMA.DIST(x, 2, 500, TRUE) to find the probability that a claim is under a certain dollar amount.

5. Beta Distribution (Default Probability)

To simulate a "Probability of Default" between 0 and 1 (using Alpha=2, Beta=5):

Formula: =BETA.INV(RAND(), 2, 5)

Practice Task: Use =BETA.DIST(0.1, 2, 5, TRUE) to find the probability that the default rate is less than 10%.

6. Weibull Distribution (Reliability)

To model equipment "wear-out" (Shape=1.5, Scale=1000):

Formula: =1000 * (-LN(1-RAND()))^(1/1.5)

Practice Task: Use =WEIBULL.DIST(500, 1.5, 1000, TRUE) to find the probability of failure before 500 cycles.

Pro Tip for your [Distribution Practice](#) sheet:

If you want to "freeze" the data so the numbers don't change every time you edit a cell, copy the cells where the data is and then use Paste Special > Values.

Would you like me to explain how to interpret the results of any of these specifically?

Random Variable (x)	Key Parameters
Asset Return	Mean (μ), Std Dev (σ)
Event Count	Rate (λ)
Time Duration	Rate (λ)
Loss Severity	Alpha (α), Beta (β)
Risk Percentage	

ar amount x.

e you used the RAND() formulas and Paste Special > Values only.
